

Gu Shuhao

Male | Class of 2027 Master's Student | 13761056216 (WeChat) | 1595916384@qq.com

Profile

Experienced in business system development and quality assurance, covering requirement decomposition, data modeling, API integration, E2E regression, and issue diagnosis. Able to turn business requirements into verifiable delivery outcomes.

Internship Experience

	Baidu, Inc. AI Test Development Intern (DuMate)	May 2026 - Aug 2026
Business flow testing E2E automation platform Multi-system regression Issue diagnosis		
- Built a desktop E2E automation testing platform and turned core business flows into reusable cases; verified functionality through preconditions, key actions, page and data results, logs, and screenshots, then located and retested failures. - Executed full functional regression across multiple HarmonyOS versions and devices, covering login, main conversation, skills, automation, and device management; followed defect localization, retesting, and release conclusions. - Supported mobile release quality assurance by regressing core features, login, and data-reporting flows; identified a one-click login blocker caused by package configuration, passed retesting with the correct release package, and synchronized the test conclusion.		
	Shanghai HuanDian Information Technology Co., Ltd. Agent Development Intern	Nov 2025 - Mar 2026
Web automation Interaction tools Execution replay Performance optimization		
- Contributed to web automation tool development, converting natural-language test documents into page recognition, task planning, action execution, result verification, and Playwright script archiving workflows. - Improved page information extraction and interaction tools for live-streaming scenarios; achieved 90%+ key-component recognition and a 78% overall case execution success rate, reducing average step time from 20s+ to about 7s. - Added bounded retries, step limits, and failure records, using page snapshots, logs, screenshots, and verification results to support execution replay and issue diagnosis.		
	Shanghai AIQ Information Technology Co., Ltd. AI Application Quality Intern	Sep 2025 - Nov 2025
Automated evaluation Concurrency and endurance Output quality HTML reporting		
- Built an automated long-term memory evaluation workflow and a multi-user concurrency engine, producing HTML reports for matching accuracy, execution efficiency, and decay trends. - Designed and ran a 60-user, 60-minute endurance test for model services; tracked success rate, response time, and abnormal returns, and correlated CPU/memory curves to analyze latency jitter, timeouts, and resource bottlenecks.		

Earlier Experience

	Shanghai Fengtao Asset Management Co., Ltd. Full-stack Development Intern	Jun 2025 - Sep 2025
Contributed to full-stack development of a quantitative factor management platform with Flask/SQLAlchemy, PostgreSQL, Vue 3, and Element Plus, covering factor application and approval, metadata management, compute jobs, and result presentation; maintained Swagger documentation and completed integration debugging.		

Core Skills

Software Development: Python/Flask, TypeScript/Node.js, Vue 3, PostgreSQL	Automated Verification: Playwright, Electron E2E, YAML, API and UI assertions
System Quality: Multi-device regression, performance stability, state isolation, recovery	Engineering Collaboration: Requirement clarification, Swagger, API integration, log diagnosis

Education

	University of Shanghai for Science and Technology	School of Optical-Electronic and Computer Engineering Master's, Computer Science and Technology Top 10%	Sep 2024 - Jun 2027
	Shanghai University of Engineering Science	School of Electronic and Electrical Engineering Bachelor's, Data Science and Big Data Technology Top 10%	Sep 2020 - Jun 2024
