

Gu Shuhao

Male | Class of 2027 Master's Student | 13761056216 (WeChat) | 1595916384@qq.com

Profile

Focused on AI application quality and test development, with experience in Agent E2E testing, multi-platform regression, outcome evaluation, and failure attribution. Skilled at turning natural-language requirements into executable cases and closing the loop with DOM, logs, screenshots, and test reports.

Internship Experience

Baidu, Inc. AI Test Development Intern (DuMate)

May 2026 - Aug 2026

Agent product testing | E2E automation platform | HarmonyOS regression | State and failure attribution

- Built a desktop E2E automation testing platform and turned core business flows into reusable cases; verified functionality through preconditions, key actions, page and data results, logs, and screenshots, then located and retested failures.
- Executed full functional regression across multiple HarmonyOS versions and devices, covering login, main conversation, skills, automation, and device management; followed defect localization, retesting, and release conclusions.
- Completed P0 regression for scheduled tasks after enterprise-account permission changes across Windows, macOS, and different runtime environments; verified permission blocking, historical prompts, permission recovery, and user data isolation.

Shanghai HuanDian Information Technology Co., Ltd. Agent Development Intern

Nov 2025 - Mar 2026

Browser-Use | Page understanding | Action tools | Retry loop | Playwright

- Contributed to Browser-Use customization, converting natural-language test documents into a page-state extraction, model decision, Action execution, result assertion, and Playwright archiving workflow; extended Controller/Action, DOM/JS injection, and XPath mapping.
- Improved page information extraction and interaction tools for live-streaming web scenarios; achieved 90%+ key-component recognition and a 78% overall case execution success rate.
- Added bounded retries, step limits, and failure records, preserving DOM snapshots, model decisions, logs, screenshots/GIFs, and assertions for replay and diagnosis; reduced average step time from 20s+ to about 7s by trimming irrelevant page information.

Shanghai AIQ Information Technology Co., Ltd. AI Application Quality Intern

Sep 2025 - Nov 2025

Long-term memory evaluation | Multi-user concurrency | Model service endurance | HTML reporting

- Built an automated long-term memory evaluation workflow covering memory injection, distractor conversations, and recall verification for write, update, ambiguity, and reasoning scenarios; developed a multi-user concurrency engine and HTML reports for accuracy, efficiency, and decay trends.
- Designed and ran a 60-user, 60-minute endurance test for model services; tracked success rate, response time, and abnormal returns, and correlated CPU/memory curves to analyze latency jitter, timeouts, and resource bottlenecks.

Earlier Experience

Shanghai Fengtao Asset Management Co., Ltd. Full-stack Development Intern

Jun 2025 - Sep 2025

Contributed to full-stack development of a quantitative factor management platform with Flask, PostgreSQL, and Vue 3, covering factor application and approval, metadata management, compute jobs, result presentation, and RESTful APIs; maintained Swagger documentation and completed integration debugging.

Core Skills

Testing & Automation: Playwright, Electron E2E, YAML, API and UI assertions

Engineering: Python/Flask, TypeScript/Node.js, Vue 3, PostgreSQL

Agent & Evaluation: Browser-Use, Action/Tool, long-term memory, badcase analysis

Diagnosis: Logs, screenshots, DOM snapshots, traces/artifacts, performance metrics

Education

University of Shanghai for Science and Technology

School of Optical-Electronic and Computer Engineering | Master's, Computer Science and Technology | Top 10%

Sep 2024 - Jun 2027

Shanghai University of Engineering Science

School of Electronic and Electrical Engineering | Bachelor's, Data Science and Big Data Technology | Top 10%

Sep 2020 - Jun 2024
